Number of Seats : 1
On Castors : No
Pack Quantity : Product Comprises 1 Pack(s) - Each
Containing 30 Chair(s) - Total 30 Piece(s)
Product Type : Classroom Chair
Stackable : Yes
Tilt Adjustment : No

Pack Quantity 1
Price : £609.55

Overview

Titan (430mm) One Piece School Chair (Charcoal) for 9-13 Years (Pack of 30) KF838726

A child will sit on a chair for up to six hours a day over a period of 11 years or more.

Furniture must therefore be durable and easy to clean and repair.

Cost is always a driver and in education environments this is particularly acute as furniture is often the last purchase in a long building or refurbishment process.

All too often it is seen as low status and/or purchased as an afterthought, with the consequence that the benefits of a new school are diminished by inappropriate furniture.

Based on purchase cost criteria alone, furniture can be unattractive, unergonomic and of poor design.

The result is students feeling a lack of ownership over the furniture, encouraging graffiti and vandalism and shortening the life span.

The majority of school chairs will need to last at least 10 years; therefore the cost per child for a cheap school chair can be as low as 60p per year.

Although good furniture may carry a small cost premium, can we afford to ignore the benefits of providing high quality furniture that is suitable for all users? Today's children are part of a design conscious society and this awareness extends to the furniture they use.

Good furniture indicates that the purchaser respects the children; in return they are more likely to adopt a more positive attitude which is more conducive to learning.

Sizes 5 and 6 have undergone further testing to BS EN 1573:2007 Test Level 2 - the updated test for up to 25 stone users.

This test makes the Titan one-piece one of the strongest chairs available today.
