Product Type : Digital Video Recorder
Resolution (Maximum) : 1920 x 1080 Pixels
Video Channels : 8

Pack Quantity 1
Price : £324.13

Overview

Swann 8 Channel 4 Camera DVR CCTV Kit

You'll always know what's happening with Swann's surveillance technology.

The 1080p live and recorded video is 4.5x better than the DVD quality (960H or 480p) used in most DIY CCTV systems.

Peace of mind comes from being able to see activity in Full HD, with easy identification of facial detail, license plates and clothing patterns.

This surveillance system comes with a massive 1TB hard drive & 4 weatherproof PRO-T853 security cameras built tough for the outdoors or indoors.

See in the dark up to 100ft (30m) with the camera's powerful infrared night vision.

The cameras come with BNC cables.

If your property has existing BNC cables, we advise you to test your new system for 2 days with the existing cables before full installation.

For optimum performance, we recommend you use the new cables supplied.

Expand your kit by adding up to 4 more cameras for a complete 8 channel home security system, suitable for medium-sized businesses & detached homes for monitoring indoors & outdoors.

The HomeSafe Views app ensures you'll always be connected to your home or business, allowing you to see the cameras on your phone or tablet.

You can even search the recordings to play them back, wherever you are in the world.

Keep an eye on your kids, babysitter, tradespeople, pets and everything else that matters to you and your family.

If you have a business, you can always see the cashier, storeroom, warehouse and check in on your staff's safety and performance.

And of course, in case anything happens, you'll have video evidence in 1080p Full HD. An 8-channel kit suits medium businesses & detached houses, which will need outdoor & indoor monitoring.

The included 4 cameras can be installed on the most vulnerable points.

You can still add up to 4 more cameras for a total of 8 to cover blind spots you may identify later.

Try to imagine yourself as a burglar & think about which weak points of your property you would use to break in & what you want to monitor to know how many cameras you'll need.
