Overview

Fibreglass Platform Step Ladders 4 Tread

This Abru Fibreglass Stepladder is ideal for performing electrical work, as the non-conductive fibreglass stiles up to 30,000 volts, allowing you to work much more safely around electricity.

The four slip-resistant, traction tread steps also provide extra security while using this ladder.

The Abru Fibreglass step ladder also includes an integrated tool tray on the top step, providing you with an alternative to constantly ascending and descending the ladder when you require a different tool or part.
